

Notice: studentID is not necessary to label in your codebook since it is course specific and I mostly need it to ensure students obtain full marks for filling out surveys.

Gender	A student's self-identified gender. Other = a student identifies outside of the gender binary. Remark. If the column contains a short-form of the description, such as "M", "F", and "O", then you would need to define this, i.e: M = male, F = female, O = a student identifies outside of the gender binary.
Status	Whether or not a student is international or domestic. Remark. Similar to the above, if we used numbers or "D" and "I", you would need to define this.
LikesAssignments	Indicates whether or not students like assignments integrated in their courses over pure examinations.
Collaboration	Indicates how much students perceive assignments to enhance their collaboration and teamwork skills. A higher number indicates a more positive preference. 1 = strongly disagree, 2 = disagree, 3 = slightly disagree, 4 = neutral, 5 = slightly agree, 6 = agree, 7 = strongly agree
Writing	Indicates how much students perceive assignments to enhance their writing skills. A higher number indicates a more positive preference. 1 = strongly disagree, 2 = disagree, 3 = slightly disagree, 4 = neutral, 5 = slightly agree, 6 = agree, 7 = strongly agree
Interesting	Indicates how much students perceive assignments to be interesting. A higher number indicates a more positive preference. 1 = strongly disagree, 2 = disagree, 3 = slightly disagree, 4 = neutral, 5 = slightly agree, 6 = agree, 7 = strongly agree
Understanding	Indicates how much students perceive assignments to enhance their understanding of statistical concepts. A higher number indicates a more positive preference. 1 = strongly disagree, 2 = disagree, 3 = slightly disagree, 4 = neutral, 5 = slightly agree, 6 = agree, 7 = strongly agree
Coding	Indicates how much students perceive assignments to enhance their coding skills. A higher number indicates a more positive preference. 1 = strongly disagree, 2 = disagree, 3 = slightly disagree, 4 = neutral, 5 = slightly agree, 6 = agree, 7 = strongly agree

There are many different types of acceptable codebook styles. You do not need to copy mine exactly. The goal is to translate the column names and inputs into something that makes sense to someone that hasn't conducted the study.
